

Japanese Economy: Analysis and Forecasts No.146

13 December, 2023

A Macroeconomic Analysis Project

► This report is a summary of the economic analyses and forecasts made by APIR's macroeconomic analysis project team.

► The project team consists of young professionals from member companies and APIR researchers, and is headed by Yoshihisa Inada, Director of the APIR Center for Quantitative Economic Analysis and Professor Emeritus of Konan University.

► This report and the forecasts in it were co-authored by Yoshihisa Inada and Mitsuru Shimoda from the Japan Applied Research Institute.

► This project is part of a 40-year research collaboration between young business professionals and academics, and its forecasts are used widely.

► The project was originally established by Chikashi Moriguchi and Kanemi Ban, Professors Emeritus of Osaka University. In 2005, we incorporated Current Quarter Model (CQM) forecasts into our quarterly macroeconomic forecast model.

► Aiming to provide a timely response to changes in the economy, this report has been published quarterly since 2004.

Forecast Highlights

Revised growth forecast reflecting the second advance estimate for Q3 GDP

- Real GDP growth forecast: +1.7% in FY 2023, +1.4% in FY 2024, +1.1% in FY 2025 -

- ◆ According to the second official advance estimate of GDP for Q3 2023 released on December 8, real GDP growth was -0.7% QoQ, or -2.9% if annualized. This was downward revision from the first advance estimate (-0.5% QoQ, or -2.1% if annualized). Also, Q1 growth was revised from negative to positive, effectively meaning Q3 logged the first negative-growth in four quarters.
- ◆ The second advance report is characterized by large upward revisions to the growth rates for Q1 2021 and the second half of FY 2022. As a result, GDP is thought to have recovered to its pre-pandemic peak earlier, in Q1 2023 (as opposed to Q2 in the first advance estimate). This also means that real GDP has exceeded its pre-pandemic peak for three consecutive quarters. Nominal GDP has exceeded its pre-pandemic peak for four consecutive quarters.
- ◆ The first annual estimate for FY 2022 was released at the same time as the second advance quarterly estimate for Q3 2023 (the annual estimate for FY 2021 was revised too). As a result, the real GDP growth rate for FY 2021 was also revised up from +2.6% to +2.8%, and that for FY 2022 was revised up from +1.3% to +1.5%. For FY 2022, private final consumption expenditure (+2.5% → +2.7% QoQ), private non-residential investment (+3.0% → +3.4% QoQ), and government final consumption expenditure (+0.7% → +1.4% QoQ) were all revised upward.
- ◆ The outlook for the Japanese economy for FY 2023-25 has been revised, taking into account the second advance report of GDP for Q3 2023 as well as our new assumptions about exogenous variables. We now forecast real GDP growth of +1.7% in FY 2023, +1.4% in FY 2024, and +1.1% in FY 2025. However, even though growth in the second half of FY 2023 was revised upward, there is no significant change in the overall GDP growth pattern.
- ◆ Since growth in real wages is unlikely to turn positive, the recovery of private final consumption expenditures in the second half of FY 2023 will be only moderate, and the contribution of private demand to GDP growth in FY 2023 will be zero. On the other hand, the trade deficit will narrow, partly due to improved terms of trade, and the exports of services will increase thanks to inbound tourism, resulting in a reversal of the contribution of net exports to positive in FY 2023. Growth in real wages is not expected to turn positive until 2025, when the effects of high inflation will wear off. Therefore, the contribution of private demand in FY 2024-25 will be modest. The contribution of net exports is also likely to decline relative to FY 2023.
- ◆ Consumer price inflation, which remained high (in the 3% range) in the first half of FY 2023, will gradually slow down. As a result, we project the core CPI inflation rate to be +2.8% in FY 2023, +2.0% in FY 2024, and +1.4% in FY 2025. On the other hand, as the terms of trade are expected to improve significantly from the previous year, the GDP deflator in FY 2023 is projected to be +3.3%, which is a revision of +0.1 percentage point from our previous forecast. In FY 2024-25, the 2023 improvement in the terms of trade is expected to exert downward reactionary pressure on the GDP deflator, which is projected to be +0.4% in FY 2024 and +1.2% in FY 2025.

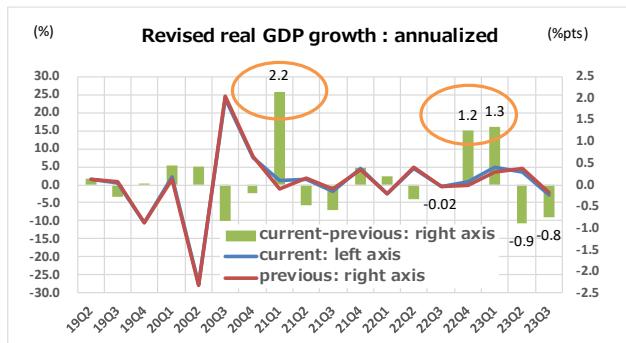

Forecast Summary

	Current forecast (2023/12/13)				Previous forecast (2023/11/29)			
	2022	2023	2024	2025	2021	2022	2023	2024

Note: 2019Q3=100

[Real GDP Growth Rate and Itemized Contribution]

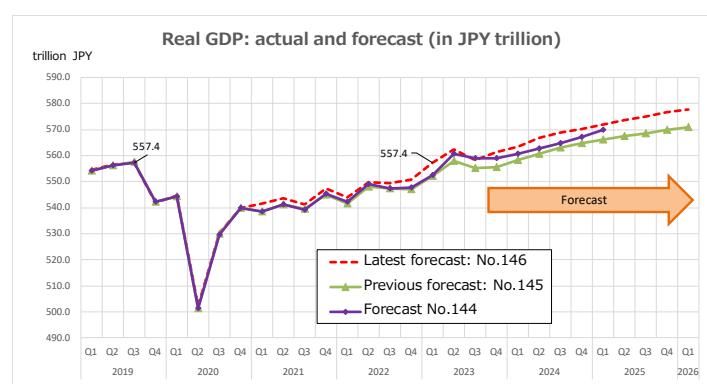

Note: Due to rounding, the total contribution of demand components does not necessarily match the real GDP growth rate.

[FY23-FY25 forecasts, all revised upward]

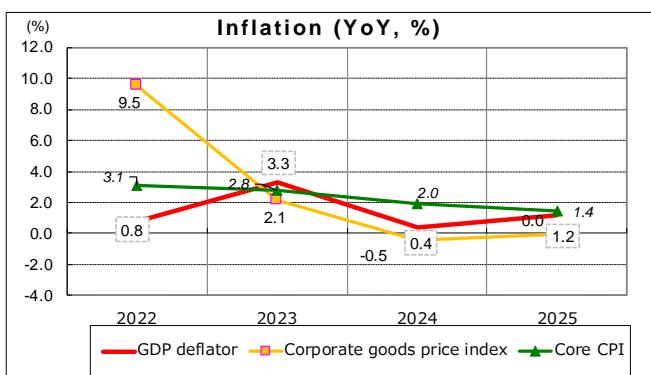

Note: Due to rounding, the total contribution of demand components does not necessarily match the real GDP growth rate.

[Footprint levels revised upward, no change in growth rate pattern]

[FY 2024 core CPI inflation rate revised somewhat upward]
