

Japanese Economy: Analysis and Forecasts No.147

27 February, 2024

A Macroeconomic Analysis Project

► This report is a summary of the economic analyses and forecasts made by APIR's macroeconomic analysis project team.

► The project team consists of young professionals from member companies and APIR researchers, and is headed by Yoshihisa Inada, Director of the APIR Center for Quantitative Economic Analysis and Professor Emeritus of Konan University.

► This report and the forecasts in it were co-authored by Yoshihisa Inada and Mitsuru Shimoda from the Japan Applied Research Institute.

► This project is part of a 40-year research collaboration between young business professionals and academics, and its forecasts are used widely.

► The project was originally established by Chikashi Moriguchi and Kanemi Ban, Professors Emeritus of Osaka University. In 2005, we incorporated Current Quarter Model (CQM) forecasts into our quarterly macroeconomic forecast model.

► Aiming to provide a timely response to changes in the economy, this report has been published quarterly since 2004.

Forecast Highlights

Recovery driven by domestic demand not in sight. Achieving a virtuous cycle of domestic and external demand remains a challenge.

- Real GDP growth forecast: +1.3% in FY 2023, +0.8% in FY 2024, +1.1% in FY 2025 -

- ◆ World trade (volume basis) in Q4 2023 increased for the first time in five quarters, +0.5% QoQ. There is a possibility of a bottoming out, but the underlying tone is weak and a full recovery will take some time.
- ◆ According to the first official advance GDP estimate, Japan's real GDP contracted by an annualized -0.4% in Q4 2023 (or -0.1% QoQ), marking the second consecutive quarter of negative growth. The actual figure was far below the market consensus forecast. It was also much lower than APIR's final CQM forecast of +1.9% (expenditure-side: +2.0%, production side: +1.7%). In terms of contributions to GDP growth in Q4 2023, domestic demand made a negative contribution for the third consecutive quarter of -0.3 percentage points (pp). Therein, private demand suppressed the growth rate by -0.2 pp, similarly for the third quarter in a row. Private final consumption expenditure, private housing, private capital investment and changes in private inventories all made negative contributions. Public demand suppressed growth for the seventh consecutive quarter, by -0.1 pp. On the other hand, thanks to the export of services (including intellectual property rights), net exports made a positive contribution for the second quarter in a row (+0.2 pp). As a result, Japan's real GDP expanded by +1.9% YoY in 2023, marking the third straight year of positive growth (for reference, the 2022 growth rate was +1.0%).
- ◆ In Q4 2023, the domestic demand deflator was +0.4% QoQ, marking the 12th consecutive quarter in positive territory. The terms of trade remained unchanged, after improving for four quarters in a row. As a result, the GDP deflator was +0.4% QoQ, marking the fifth quarter of inflation. Consequently, although the real GDP contracted, the nominal GDP expanded by +0.3% QoQ, or an annualized 1.2%, marking the first increase in two quarters. On an annual basis, Japan's nominal GDP expanded by +5.7% YoY in 2023, marking the third straight year of positive growth, and logging the highest growth rate since the +6.5% recorded in 1991.
- ◆ Incorporating the first official advance GDP estimate as well as our new assumptions about exogenous variables into our analysis, we updated our forecasts for the Japanese economy in FY 2023-25. We forecast real GDP growth of +1.3% in FY 2023, +0.8% in FY 2024, and +1.1% in FY 2025. All these figures represent downward revisions from our previous forecast (No. 146), by -0.4 pp for FY 2023, by -0.7 pp for FY 2024 and by -0.1 pp for FY 2025, respectively. Q1 2024 is expected to stagnate due to the reactionary decline in exports and the decline in automobile production. In the first half of 2024, a recovery driven by domestic demand is still out of sight. Achieving a virtuous cycle of domestic and external demand remains a challenge.
- ◆ Since the recovery in Q1 2024 will also remain moderate, the private demand contribution in FY2023 will be -0.3%pt. On the other hand, the trade deficit will narrow, partly due to improved terms of trade, and the services exports will increase due to continued strong inbound tourism demand, resulting in a significant reversal in the contribution of net exports in FY2023 from the previous year, +1.3%pp. Real wages are not expected to revert to positive growth until the second half of 2024, when the effects of inflation will start to wear off. For that reason, the contribution of private demand to growth will remain weak throughout FY 2024-25. On the other hand, the contribution of net exports is projected to remain stable.
- ◆ CPI inflation, which remained in the 3% range in the first half of FY 2023, is expected to decelerate gradually. We forecast a core CPI inflation rate of +2.8% in FY 2023, +2.0% in FY 2024, and +1.4% in FY 2025. Our forecast remains unchanged from the previous report (No. 146). Since the terms of trade have improved significantly in FY 2023, we forecast a GDP deflator of +3.8%. This means that the nominal GDP is expected to expand by +5.2%. For FY2024-25, the GDP deflator will be +1.5% for FY24 and +1.8% for FY25 due to a rebound from improved terms of trade.

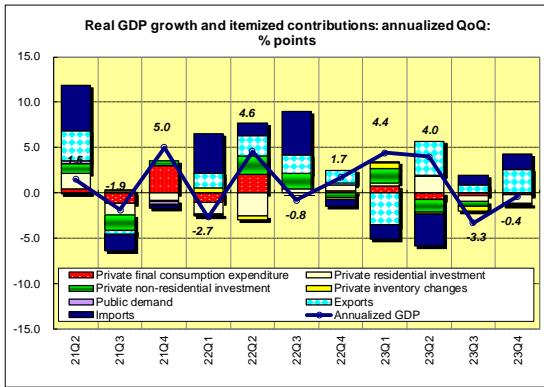

Forecast Summary

	Current forecast (2024/2/19)				Previous tecast (2023/12/13)			
	2022	2023	2024	2025	2022	2023	2024	2025

Notes: SNA = System of National Accounts. In the quarterly statistics, the figures in the first and second rows below the main series represent QoQ changes (%) and YoY changes (%) respectively. In the annual statistics, the figures under the main series represent YoY changes (%). Highlighted columns represent actual values.
